The project is well prepared, proposes development of a common flood protection strategy for the 3 countries and its inclusion into national flood protection systems. The development of the strategy will build on previous work, will be based on maintenance and/or restoration of floodplains and will be done in close partnership with local and national stakeholders. In each country, the project will finance restoration activities of already prepared technical proposals for restoration, as pilot demonstration.

During proposal development more balanced partnership shall be established, especially in Hungary and Ukraine (involving local municipalities and NGOs). It is not clear, if the demo sites with prepared technical proposal for improvement of hydrological regime are already identified. They shall be clearly specified in the proposal.
